Evan Lee

(925)-791-9632 exl2813@berkeley.edu evxlee evxlee.github.io EvxLee

Education

University of California, Berkeley Expected Graduation: May 2029

Bachelor's in Data Science, Bachelor's in Economics, Minor in Computer Science

Relevant Coursework: Principles and Techniques of Data Science, Discrete Mathematics and Probability Theory, Data Structures, Linear Algebra, Introduction to Business Analytics, Human Contexts and Ethics of Data Science

Experience

Ithildin (Berkeley Legal Tech SkyDeck Startup) Jun 2026 – Aug 2026

AI/ML Engineer Intern *Berkeley, CA*

- Designed and built the real-time transcription and speaker diarization engine powering the firm's deposition platform, pairing Deepgram ASR with Diart
- Engineered a benchmarking framework scoring candidate ASR and diarization models against certified court-reporter transcripts to select the production stack

UCSF Yang Lab Jun 2026 – Present

NLP Researcher *San Francisco, CA*

- Building a multi-agent system that automates patient cohort selection for clinical studies, incorporating a steering layer that applies clinician corrections mid-run
- Developed an NLP pipeline extracting 6 clinical-trial metadata fields from biomedical articles using BioBERT, SciFive, and DistilBERT; automated prompt optimization with DSPy and GEPA to raise accuracy by 9% on 60 held-out papers

UCSF Tech Lab March 2026 – Present

Data Science Researcher - advised under Faris Raza *San Francisco, CA*

- Engineered a multimodal data pipeline over the NIH AI-READI diabetes dataset, integrating CGM, ECG, wearable, and clinical signals into a unified patient-level feature table
- Ran cross-modal statistical analysis on glycemic control, applying non-parametric testing, multiple-comparison correction, and regression adjustment for confounders

FactGrid Cuneiform Feb 2026 – June 2026

NLP Researcher - advised under Dr. Adam Anderson *Berkeley, CA*

- Fine-tuned a ByT5 model to correct OCR errors in Akkadian cuneiform, training on 18,579 scholar-verified transliteration lines across 2,005 tablets
- Decreased CER by 75% on held-out scripts, improving chrF++ by 18.5 points and BLEU by 28.2 points

LG Nova (LG Corp's Venture Arm) Feb 2026 – May 2026

Machine Learning Engineer (Contract) *Berkeley, CA*

- Engineered a RAG pipeline over LG Nova's startup portfolio using Amazon Bedrock Titan v2 embeddings and pgvector, enabling semantic search for an internal analyst chatbot
- Built end-to-end integration tests and a Precision@5 evaluation framework, benchmarking retrieval quality across the full ingest → embed → search pipeline

Projects

Data Matchmaker Agent | *AgentX – AgentBeats Competition (Berkeley RDI)* Dec 2025 - Jan 2026

- Placed 2nd in OpenAI-sponsored Finance Agent track; handled platform deployment for an LLM evaluator agent that auto-scores candidate agents on multi-source data integration tasks

EquiMatch | *Python, Scikit-learn, FastAPI* Hackathon, Nov 2025

- Placed 3rd at UC Berkeley's 7th Annual Datathon for Social Good; built a college recommendation pipeline for underserved students ranking 6,000+ institutions by RBF-normalized L2 similarity over KNN-imputed equity metrics
- Integrated an LLM chatbot (Llama 3.1) to support natural-language queries over recommended colleges

LyricCal | *Python, Flask, Keras* Sept 2025 - Dec 2025

- Built a mood-based song recommender applying DistilRoBERTa to classify lyric sentiment, matching top-K songs by cosine similarity over autoencoder-learned acoustic embeddings

Technical Skills

- **Languages:** Python, SQL, R, Java
- **Data Science/ML:** Pandas, NumPy, Scikit-Learn, XGBoost, PyTorch, TensorFlow/Keras, Matplotlib, Seaborn, OpenCV, Tableau, Hugging Face, DSPy, RAG, Hypothesis Testing, Regression, Clustering
- **Tools/Systems:** AWS (Bedrock), Azure, PostgreSQL, pgvector, Docker, Git
